

“An Amazing report! I know how to really help my child now”

“School were really shocked by son’s result and high IQ, which made them rethink how they work with him”

“The report was so positive and easy to read. I just wish I had organized this for her years ago”

“Inspire your child to connect with their talents – Blooming Genius delivers reassuring reports that draw out key abilities and competencies”

Positive Assessment

Positive Cognitive Assessments for under 18s (for ages 7+ and including vocational strengths and careers advice for ages 12+)

Education Health Care Plans

Our reports can ensure that Education Health Care Plans and Individual Education Plans accurately meet your child's needs or provide a case for further referral

Positive Assessment reports provide a clear analysis of cognitive strengths and difficulties. They also explain the implications of these for learning at home and at school, as well as the best support needed for your child to learn successfully.

Our Positive Assessments use many of the same tests as those for diagnosis of dyslexia, dyspraxia (DCD), ADHD and autism. The findings will, whilst not sufficient for a formal diagnosis, identify appropriate areas for further investigation if required and make a case for referral.

Positive Assessments can be arranged for young people from the age of 7 upwards, and can also be delivered to adults.

Designed to make a difference

Unlike many traditional reports, we provide detailed recommendations for strategies and scaffolds that will be effective to build on your child's strengths and successfully manage difficulties.

Our recommendations will enable teachers and other adults working with your child to understand what support and teaching will ensure s/he achieves their full potential.

For adults, positive assessments often come too late; many have journeyed through education believing that they lack skills and intelligence.

We want to redirect attention to what your child can do and prevent the years of anguish and difficulty that many have experienced.

We want to equip young people with the knowledge to achieve their very best now and into the future.

Is it time for a Positive Assessment?

- Does your child struggle with learning at school?
- Do they find concentration difficult?
- Have the strategies tried so far failed to make a positive difference?

Building on strengths and understanding Difficulties

Our Positive Assessment places a particular focus on strengths and how these can be used to support good achievement in school and promote high levels of self-efficacy.

The assessment enables young people to better understand what they do well and how to build a successful life as a learner around their strengths.

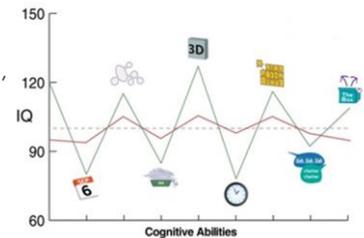

It will also help them to understand their difficulties and view these in relation to their neurodiversity rather than a lack of intelligence. Through this, the young person retains confidence and develops a solution-focused attitude.

We aim to ensure that young people use the experience to engage at school and feel hopeful that, with effort, they can achieve well and work towards viable and exciting career options and a bright future ahead.

Easy to Read and Accessible to All

Our assessment reports are designed to make a difference. We believe that young people themselves need to understand their strengths, difficulties and what will help them to achieve their best.

We therefore write reports in a way that everyone will understand and are happy to follow up with a call or video conference.

What to expect:

The assessment can take place at school, at home or an alternative suitable place by arrangement.

It will take between 2-3 hours and produce a clear report, delivered within 10-15 working days with a full verbal de-brief.

Professionals, such as teachers, special needs co-ordinators, educational psychologists and medical practitioners, will be able to read and understand the implications of the results and how they might be used to provide better support for your child.
